EXAMINER'S AMENDMENT

1. An Examiner's Amendment to the record appears below. Should the changes and/or additions be unacceptable to Applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.
2. Authorization for this Examiner's Amendment was given in a telephone interview with **John C. Pokotylo on 14 September 2004.**
3. The application has been amended as follows:
 - o **Please cancel Claims 1, 5, 13, and 14.**

Drawings

4. The Examiner accepts the replacement sheet, which includes FIG. 1, attached to the Amendment filed on 13 August 2004.

Specification

5. The Examiner accepts the amendments to the specification made in the Amendment filed on 13 August 2004.

Allowable Subject Matter

6. **Claims 3, 4, and 7 – 12** (now renumbered 1 – 8, respectively) are allowed.

7. The following is an Examiner's statement of reasons for allowance:

For newly independent **Claims 3, 7, and 9**, while the prior art teaches of a power supply remainder judgment section to set a level necessary for executing an operation corresponding to a camera mode, that is selected by the mode select section, according to each of the plurality of modes and to judge whether a detected remainder of the power supply is equal to or larger than the set level, the prior art does not teach or fairly suggest setting the set level to different levels for each of the camera modes and, more specifically, including setting a level at a print mode lower than a level at a record mode, or setting a level at a starting to take a picture until a print operation is complete, at a direct print mode, no image capture, mode, respectively.

For previously independent **Claim 11**, while the prior art teaches a battery remainder evaluation section which compares a remainder of a battery loaded into the electronic camera with a predetermined judgment level and a sequence controller which controls a camera based on the comparison result, the prior art does not teach or fairly suggest wherein the sequence controller applies a different judgment level to the battery remainder evaluation section at the start of an operation of a print section and in a print operation.

Lastly, in regards to newly independent **Claims 1 and 13**, the Applicant stated that Claims 1 and 13 are patentable because the prior art (Sakaegi and McIntyre) "either taken alone, or in combination, neither teach, nor suggest, a camera with a print section having a luminescence section to expose a photosensitive form based on image information obtained by an electronic imaging section of the camera" nor "a built-in printer section including a diffusion transfer reversal process printer", respectively.

Prior to this Examiner's Amendment, the Examiner brought to the attention of the Applicant, US Patent Nos. 5,835,809 (Stephenson et al.) and 5,946,031 (Douglas). The Stephenson et al. patent clearly discloses an electronic camera with a built-in printer section, which "includes photosensitive media which is adapted to be illuminated by the fluorescent light image from the liquid crystal display" and the Douglas patent clearly discloses an electronic camera with a built-in printer section using "instant film" otherwise known as "diffusion transfer photographic film". In conclusion, the Applicant agreed to cancel Claims 1 and 13 and their respective dependent Claims 5 and 14.

8. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
